

Top SEO Pages – Managed Service Offerings

Introduction

Finding the Right Company for You...

There are a number of questions you will need to ask yourself before deciding on what website and SEO (Search Engine Optimisation) provider you should choose. To assist you, here are some of those questions to help you get going:

- Are your needs temporary or ongoing? Temporary would be just an initial once off cost to set up your website and initial SEO structure and you would then manage your website on a month to month basis. Permanent would be an ongoing website management service where all your website activities are taken care of for you.
- How big is your company and how big do you want your presence to be online? Local or small businesses will generally look to have the basics, so a website that will basically detail what products or services you have to offer your clients and no ecommerce functionality ie: Shopping Carts, Credit Card processing services. Medium to Large businesses will generally look to utilise ecommerce services and SEO services to rank high on the search engines and attract a larger online marketing presence.
- What is your target market and how does this affect your online investment costs? If you are a niche based business then your target audience will be easier to attract to your products or services, because the competition for your keywords and the number of similar websites will be low, so this will mean it is easier to rank and attract your ideal clients and therefore resulting in a lower SEO cost. Conversely a broad, global, highly competitive market will result in limited keyword choices and increased ranking obstacles and therefore a higher SEO cost.
- On the subject of target markets, the mobile revolution has begun and you will want to consider whether you go Mobile-Friendly or not. Top SEO Pages highly recommends going Mobile-Friendly because this brings with it excellent opportunities for all businesses to create customer loyalty relationships through the tools like Mobile Application Push Notification services.

We have aligned our service offerings with the above bullet point Q&A's, so that our pricing structure matches your business needs. The service offerings have been broken down into four parts.

The first part is a once off cost for the creation of your website ([Website Design Services](#)), so this is where you would start if you have no online business presence at all and you are now looking to create your first business website.

The Second part is a monthly or annual ongoing cost where we handle your website hosting and SEO growth related activities ([Website Management Services](#)), so this is where you would already have a website or we recently built one for you and you now need it to be maintained on an ongoing basis.

The Third service package is aligned to the current mobile revolution, where we provide new Mobile-Friendly Websites and custom design Mobile Applications ([Mobile Design Services](#)). Our Mobile-Friendly websites are designed to be Search Engine Optimised, so that our client's new and existing websites are not penalised by any of Googles major ranking penalty releases. Our Mobile Applications assist our clients with improved customer loyalty relationships through the numerous benefits of going mobile ie: Push Notifications

The fourth service we provide is geared around growing your online market presence over a period of time, so that your business can reach a wider customer base ([Search Engine Optimisation Services](#)).

The option is yours to use us to just create your website and we then hand it over to you to manage yourself, or you can sign up for the **hands free services** where we manage it all for you...

P.T.O.

Note: As stated above the Mobile Applications Package designed to your online business requirements is a once off charge of \$897 and then an ongoing \$27pm, or \$247pa charge to cover the maintenance costs associated to managing this service.

Search Engine Optimisation Services

Search Engine Optimisation (SEO) involves a number of processes where we help to optimise your website (amongst other activities) to aid you in ranking your website higher up in the search engines.

Did you know that Google Webmaster 2014 statistics revealed that on average 71% (the first 5 results accounted for 67%) of searches had click through's for Page One rankings. Page two and three resulted in an average of 6% click through's.

Therefore, if you wish to accelerate your businesses online grow and become a market leader you will need to focus your online marketing efforts on reaching at least Page One in the Search Engines. At Top SEO Pages we follow a number of industry established and recognised processes to help grow your online presence over a period time.

As mentioned above, Top SEO Pages grows your online presence over a period of time, because there is no long lasting silver bullet to SEO growth, unless it is completed correctly. To ensure businesses maintain their long term page one ranking positions these processes need to be correctly implemented over a period of time, so that your business is protected from any future Google Algorithm updates (ie: Penguin, Panda, etc).

We are unable to divulge all the details of how we rank websites, as that will provide our competition with leverage to utilise our systems and processes, which would cause us to lose business. However, we are able to divulge a summarised version of just some of the publicly known steps we also utilise within our SEO packages.

Search Engine Optimisation (SEO Business Growth Package) – Priced per Keyword

Contact Us for a Quote

- Website investigations will be conducted around Google Analytic's, Keyword Analysis and Competition Analysis to identify where we can make improvements and identify new opportunities to aid in your businesses SEO growth. Reports will be produced upon request.
- A Complete On Page SEO audit of your website will be completed, along with the creation of Backup Restore Points and Security Vulnerability checks. The On Page SEO will include amongst other activities a review of: Permalinks, Title Tags, Alternate Tags, Meta Descriptions, Keyword Density, Site Navigation (XML Sitemap), Robots.txt, etc.

- Page load time is very important for aiding in SEO efforts. Website Image optimisation and Page Load Time improvements will be implemented across the entire website. A review of your Theme and Plugins will also be completed and we will look to implement a couple of optimisation plugins to aid in improving your caching and page load speeds.
- We will work with your business representative to complete a bi-monthly (once every two months) Press Release about certain aspects of your business. This Press Release will be broadcast to over 300 established and highly trusted online news agencies. This is a key step towards ensuring the longevity of your Search Engine rankings.
- With the completion of all our SEO processes and activities we create a comprehensive list of all your businesses internal and external website links to build your back link indexing profile in the search engines. In summary this ensures that the Google algorithms begin to correctly index your website and start to improve your rankings.
